OUR COMMITMENT TO QUALITY

Recognising the ever increasing level of scrutiny directed upon material selection and installation quality processes within the UK cladding industry, CSW Cladding Ltd has invested heavily in quality assurance framework development, workforce training and the latest live digital data platforms.

This investment allows us to offer Clients and Principal Contractors the highest standard of installation monitoring and quality assurance throughout the duration of your project

Our fully comprehensive quality assurance package is supported by photographic evidence at every stage, from delivery of material to site, to each phase of the installation process.

TECHNICAL SUBMISSIONS

Our technical department will collate all available technical information for each material specified for the project. This will include a general summary of the material characteristics along with all available Material, Product, Safety and Fire Data Sheets DOP's, Installation guides, BBA certification and environmental certification such as BRE Global/BES 6001.

POINT OF INSTALLATION

Our installation QA inspection sheets will describe the materials specified and include relevant material data sheets. Photographic evidence will be collected for every material installed. This process is managed via our digital platform with integrated version controls and time/date/GPS location logged for all evidence collected.

DELIVERY RECORDS

CSW will record all material deliveries along with dispatch and delivery notes ensuring the products specified are the products delivered and installed. All photographic evidence is maintained within our digital platform with associated time/date and GPS location stamps.

INSPECTION QUALITY CONTROL CHECKLISTS AND EVIDENCE

INSPECTION REGISTER

A QA inspection register will be maintained for the duration of the project and shared with all relevant parties as a live cloud stored file. The register will include:

- Relevant project info including key people and report recipients
- Description of works package
- Description of QA inspection IDs with associated task and material
- Elevation mark up sheets to visually identify progress for each inspection phase
- List of inspection reports issued for each inspection phase
- Links to cloud storage for inspection reports for each inspection phase
- Version control with change log and author

INSPECTION REPORTS

The Inspection report process is fully managed via our digital platform offering live access to all data by CSW head office within moments of its collection in the field. This system offers our client's massive benefits over historical paper based systems including:

- Fully integrated version control system.
- Contact free sign off for client representatives witnessing inspection hold points.
- Ability to rapidly adjust and re-deploy inspection reports in response to changes such as material changes, client requests or as-built information supplied by 3rd parties.
- All inspection reports contain material relevant checklists supported by photographic evidence.
- Time, Date and GPS location stamping for all photographic evidence collected.

SHARED ACCESS

All documentation produced as part of the quality assurance process will be available to the client throughout the duration of the project via a cloud shared folder. This unrivalled accessibility ensures you can have full confidence in the installation service CSW Cladding Limited supply with a fully documented, evidence supported package of information available at programme completion.

HANDOVER

Following completion, our O&M manual can include any elements of the data collected during our programme. This offers our clients and principal contractors a robust record of the entire rainscreen installation process that can be maintained for the lifetime of the building, and inform any future works undertaken on the building façade.
